SUCCESS STORIES 2014

OTC Engineering

A CATALAN AND A GERMAN ENTERPRISE INTEGRATE THEIR SOLUTIONS FOR VEHICLES

A new step in smart mobility through security technologies

OTC engineering is a Catalan business based in Girona that develops products and solutions for smart and sustainable mobility and connected vehicles. It counts with a well-experienced and professional team of engineers who have developed the innovative platform CAPTURAS for vehicular connectivity. It takes the maximum benefit of the ICT integration inside vehicles in order to generate new concepts of exploitation, management and use of mobility, facilitating the daily tasks of fleet operators.

On 2014 the company participated in the EEN Brokerage Event in the Mobile World Congress organized by ACCIÓ. In the event OTC had the opportunity to meet and connect with Baimos technologies, a German developer of security technology for the automotive industry. The company provides secure transmission of codes and keys from smartphones to the vehicles.

Soon enough there were common interests which concluded in a partnership agreement. Both companies have established a win2win relationship by integrating their respective solutions, CAPTURES and BlueID TECHNOLOGY.
